Manager, Biomedical Engineering

Requisition # 113
Job Type Regular Full-time
Vacancies 1
Department Biomedical Engineering
Employee Group Non Union
Hours (Subject to change) M-F 37.5 hours per week;

Job Description

Join a team committed to excellence in supporting patient safety. The Biomedical Engineering team ensures the delivery of a comprehensive program of regular equipment inspections, training, as well as regular and emergency on-call maintenance of Hospital medical devices and equipment.

The Manager is responsible for the day to day management, operation, and organizational effectiveness of the Biomedical Engineering department, including managing all aspects of human and financial resources together with developing, implementing and managing short and long-term strategic priorities and quality improvement initiatives. The Manager will also ensure that all medical equipment covered under the scope of this position is serviced and that a standard of excellence is maintained.

Responsibilities of the role also include monitoring changing priorities, trends, legislative requirements and/or other internal and external issues related to medical device technologies inclusive of analyzing the potential impact on departmental activities and making appropriate recommendations and/or implementing appropriate changes. In consultation with appropriate staff and other stakeholders, the Manager will also define equipment implementation projects, assemble appropriate implementation teams, establish and monitor project timelines and evaluate the outcome/system performance with an aim to continuous improvement and lean processing.

Job Requirements

- Completion of a recognized Master’s degree in engineering or recognized equivalent from an accredited educational institution
- Registration as a Professional Engineer (P.Eng.) in Ontario
- 3 - 5 years recent experience managing Hospital biomedical equipment maintenance and service operations and familiarity with Hospital equipment
- 3 - 5 years recent experience in the evaluation and acquisition of biomedical equipment
- 3 - 5 years recent related experience in a healthcare environment preferred
- Demonstrated strategic thinking, creative problem-solving and planning combined with exceptional tactical implementation and project management skills
- Demonstrated strong technical understanding of medical equipment
- Excellent ability to recognize and creatively solve technical problems with a variety of biomedical equipment.
- Well-developed team-building, conflict management and consensus-building skills.
- Proven ability to work collaboratively and to motivate others

- Excellent written and oral communication and interpersonal skills with a strong customer focus and ability to work effectively in a fast paced, diverse/corporate environment
- Proven negotiation and mediation skills including demonstrated experience in vendor/supplier contract negotiation
- Self-motivated with demonstrated critical thinking and strong analytical skills
- Superior initiative and organizational skills with an ability to independently manage deadlines
- Strong ability to liaise with clinical staff on issues related to medical device technology
- Strong computer skills, including financial reporting and word processing
- Demonstrated satisfactory performance and attendance history
